

KPMG and Recorded Future combine a leading threat intelligence platform with local consulting, implementation, and operational support services - tailored to the requirements of the Norwegian public sector.

About KPMG

KPMG combines cybersecurity expertise with a global network spanning more than 145 countries. The firm has over 6,300 dedicated cybersecurity professionals worldwide, supported by more than 45,000 risk and regulatory specialists. KPMG brings together expertise from cyber intelligence, business intelligence, regulatory, and forensic backgrounds to support client needs. KPMG's approach is based on cyber threat expertise, global presence, established processes, and access to the Recorded Future platform to help organizations understand the threat landscape.

About Recorded Future

**Cyber
Operations**

**Digital Risk
Protection**

**Third-Party Risk
Management**

**Payment Fraud
Intelligence**

Recorded Future is the world's largest company specializing in threat intelligence

Its Intelligence Cloud provides end-to-end insight into threat actors, infrastructure, and targets by indexing the internet at scale across the open web, the dark web, and technical sources. This provides real-time visibility into a continuously growing attack surface and an evolving threat landscape, enabling customers to act quickly and confidently, reduce risk, and drive their business securely forward. The company is headquartered in Boston, has a global presence, and delivers unparalleled, actionable intelligence to more than 1,900 businesses and public sector organizations in over 80 countries.

Protect your key domains

Cyber Operations

Stop attackers from compromising your systems. Know, block, hunt, and respond autonomously.

Third-Party Risk Management

Detect third-party cyber threats before they disrupt business operations or expose data.

Digital Risk Protection

Defend your brand, workforce, and customers from threats outside your security perimeter.

Payment Fraud Intelligence

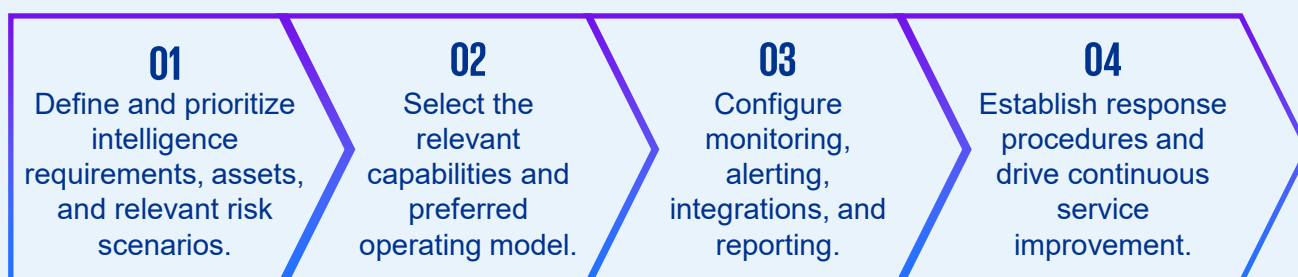

Identify compromised payment cards and checks before they're used for fraud.

KPMG and Recorded Future provide early detection of relevant threats and exposures, minimize manual analysis efforts, and ensure a shared situational awareness across both security teams and leadership. The service is scalable and tailored to your organization's maturity and capacity.

THREE SERVICE MODELS

	SELF-MANAGED	CO-MANAGED	FULLY MANAGED
SERVICE	The organization gains direct access to and operates the platform independently. KPMG and Recorded Future provide support with onboarding, training, and technical setup.	Internal analysts work closely with experts from Recorded Future and KPMG on use cases, integrations, analysis, and development of the service.	KPMG manages the Recorded Future platform on behalf of the client. Monitoring and analyzing findings, notifies on critical issues, and delivers reports and advisory.
SUITABLE FOR	Mature CTI/SOC environments with dedicated resources.	Teams looking to accelerate adoption and realize value faster.	Organizations with limited capacity or a need for a more manageable flow of alerts

KPMG is happy to help you get started. Together we:
